

SSAMI BioThreat Trainer

Safe Sampler & Multiplexing Indicator

The SSAMI platform provides a crucial advance in rapid threat detection for military, police, border and other first responders.

The SSAMI-TRAINER provides rapid testing simulator for assessing potential biotreats contained in an unknown 'white powder'. The Sampler is used to directly sample powders, surfaces, or liquids using an integrated sponge. After the sample has been collected and processed, a fraction of that liquid is seamlessly transferred into the SSAMI BioTrainer Detector. A second sample is retained in the device which can be used for follow-on testing. Once the sample has been transferred into the Detector, results are visible within 15 minutes. The BioTrainer functions identically to the SSAMI BioThreat and demonstrates the four types of outcomes (see reverse side).

- Results in 15 minutes
- Easy to use in full protective equipment
- No power requirements
- Samples surfaces, solids, and liquids
- Facilitates chain of evidence

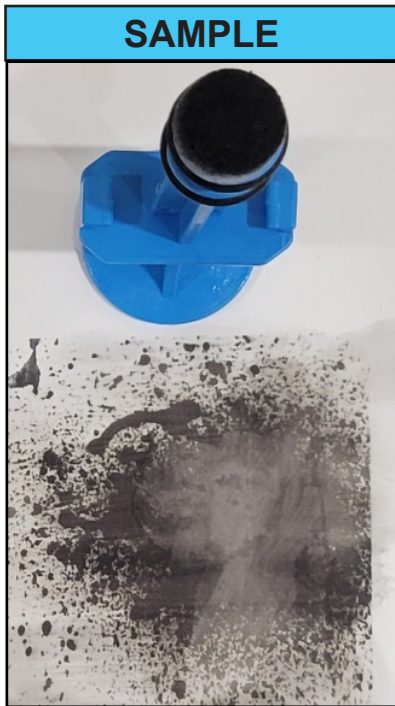

MHS in conjunction with SEDT further offer a variety of other low-cost training tools. We also support on-site and virtual training sessions.

SPECIFICATIONS:

- Pocket sized
5.5 x 1.6 In (14 x 4 cm)
3 oz (85 g)
- No power required
- No maintenance & calibration
- 18 months shelf life
- Minimal training (~5 minutes)
- Store between 39 and 122 °F (2 to 30 °C)
- Use above 59 °F (15 °C)
- Operates silently
- Minimum order quantity - 20
- Packaged in boxes of 10
